

Top of Mind in 2010

What to expect for IT and information security examinations

- A recent poll of financial institutions reported that a major source of fear and confusion in regards to their annual exams stems from not knowing what the examiner is going to look for in IT and information security and how they want this information presented. We took this data and decided to find out exactly what examiners are expecting this year.

Will you be ready for your examiner?

Please join Locknet IT Solutions and Supernal Software for an impactful presentation that outlines what examiners are asking about for IT and information security in 2010, how you can identify these issues and then gives baseline information on addressing them. This session is based on daily interaction with financial institutions and examiners throughout the US. Countless financial institutions are using this training to better prepare for their upcoming exams right now.

Author and Presentor:

Thomas Ezdon, CISA, Compliance Director for Locknet IT Solutions. Tom has a vast experience in best practices in auditing and securing business environments, especially when focusing on human activity and policy. Tom's background includes work as a state examiner and he served as Executive Vice President of a large Wisconsin financial institution. Tom is an in-demand speaker on best practices in security and compliance with state and national financial associations and has authored numerous articles in related journals.
